PSYC 300 - DATA ANALYSIS IN PSYCHOLOGY

Subject and Course Number

M: Course Objectives/Learning Outcomes

At the conclusion of the course the student will be able to:

- 1. Distinguish between descriptive and inferential statistics.
- 2. Define various key statistical terms, such as population, sample, parameter, variable, random sample, sampling distribution, level of significance, critical value, Type I and Type II errors, and the null hypothesis.
- 3. Define and describe various measures of central tendency.
- 4. Explain the concept of variability.
- 5. Calculate various statistics such as standard deviation, variance, z scores correlation coefficient (r), t-test, analysis of variance, chi square.
- 6. Distinguish between correlation and causation.
- 7. Explain the meaning and use of the regression equation.
- 8. Compute regression coefficients and fit a regression line to a set of data.
- 9. Distinguish between a theoretical and empirical distribution.
- 10. List the characteristics of the normal distribution.
- 11. Calculate confidence intervals about a sample mean and explain what they mean.
- 12. Explain the logic of inferential statistics.
- 13. Describe the factors that affect rejection of the null hypothesis.
- 14. Distinguish an independent-samples design from a correlated samples design.
- 15. List and explain the assumptions for the t-test and ANOVA.
- 16. Identify the independent and dependent variables in a one-way ANOVA and a two-way ANOVA.
- 17. Explain the rationale of ANOVA.
- 18. Define \underline{F} and explain its relationship to \underline{t} .
- 19. Compute sums of squares, mean squares, degrees of freedom, and F for an ANOVA.
- 20. Interpret an F value obtained in an experiment.
- 21. Construct a summary table of ANOVA results.
- 22. Distinguish between a priori and a posteriori tests.
- 23. Identify the sources of variance in a factorial design.
- 24. Compute F values and test their significance in a factorial design.
- 25. Interpret main effects and interactions.

PSYC 300 - DATA ANALYSIS IN PSYCHOLOGY

Subject and Course Number

N:

2.

3.

4.

5.

6.

7.

8.

9.

13.

Course Content Abuses of statistics Organizing and describing data Measures of central tendency Measures of variability Description of frequency distributions Properties of normal distributions Central Limit Theorem Introduction to probability concepts Hypothesis testing 10. Analysis of Variance and t-tests 11. Correlational methods 12. Regression and prediction Nonparametric statistical methods

14. Statistical significance versus practical importance

0: **Methods of Instruction**

This course will employ a number of instructional methods to accomplish its objectives and will include some of the following:

- lectures

- audio visual materials
- small group discussion
- research projects
- computer based tutorial exercises

P: Textbooks and Materials to be Purchased by Students

Aron, A. & Aron, E. N., (1999) Statistics for Psychology (2nd Ed.) Upper Saddle River, NJ, Prentice-Hall.

Howell, D. C., (1999) Fundamental Statistics for the Behavioral Sciences (4th Ed.) Pacific Grove, CA, Brooks/Cole.

Or some comparable textbook.

Text will be updated periodically.

PSYC 300 - DATA ANALYSIS IN PSYCHOLOGY

Subject and Course Number

Q: Means of Assessment

Evaluation will be carried out in accordance with Douglas College policy. Evaluation will be based on course objectives and will include some of the following: quizzes, multiple choice exams, essay type exams, term paper or research project, computer based assignments, etc. The instructor will provide the students with a course outline listing the criteria for course evaluation.

An example of one evaluation scheme:

12 quizzes	50%	
Computer based homework assignments		10%
Homework exercises	10%	
Term project paper	20%	
Final Exam		10%
	100%	

R: Prior Learning Assessment and Recognition: specify whether course is open for PLAR

No. Given that the course content involves theoretical and empirical analyses of statistics it is unlikely to be opened up for PLAR except as a credit transfer from another institution.
